

STANDARD OPERATING PROCEDURE: INCIDENT RESPONSE CHECKLIST

Upon confirmation of a security anomaly, operations personnel must execute the following protocol steps in immediate sequence:

Step 1: Isolate affected network segment and sever outbound gateway routing.

Step 2: Capture volatile memory dump from primary host for forensic examination.

Step 3: Notify incident commander and activate designated escalation channels.

Step 4: Rotate all administrative credentials and revoke active session tokens.

Step 5: Verify integrity of cold offline backups prior to system restoration.

Formal post-incident review must convene within twenty-four hours of containment.
